Choice 75 Height Adjustable Wall Unit With Shelf + VESA Plate Mount

Product Code

CW75-SV1-S1

The "Choice" range of products and accessories allows the user to support a tablet computer, laptop, monitor and touch screen monitor, (the device) at the correct ergonomic height for sitting or standing. By allowing the device to be supported at different angles "Choice" also facilitates direct data input and or viewing preferences.

This cost effective solution offers simple adjustment that automatically locks in place at the desired height, or viewing angle, if the device has a protective cover this can remain in place. Designed to be fixed on any secure vertical surface to allow sitting or standing height.

Base & Support Arms

The Choice Shelf offers a larger flat light weight more traditional work surface area. The shelf height is easily adjusted by simply tilting up slightly and then moving to the desired working height. The height is locked automatically once the user tilts the shelf back into the locking position. For ease of adjustment we only recommend using with devices that weigh up to 2kg.

The VESA plate mount enables the user to mount any compatible Visual display and to tilt the display to the desired angle/viewing height and then lock in position.
